## **HEALTH INFORMATION**

The Luing Cattle Society was the first to run a BVD-safe sale with its Premier Sale in February 2007. Since 2010 all official Luing Cattle Society Sales, including this one, are run under the same health rules and are therefore BVD-safe. To qualify for this, all stock must come from herds which are members of a CHeCS accredited health scheme (for this sale all herds are in one of the SAC Premium Cattle Health Scheme or the HiHealth Herdcare Scheme) and are either BVD accredited free or the sale stock have tested negative for the virus. Additionally, all stock forward are vaccinated against BVD. For herds testing for Johne's, you will notice new Risk Level categories are displayed; these are defined as follows:

<b>Status</b>	<b>Level</b>
Risk Level 1	This is directly equivalent to the previous CHeCS Accredited Free status. Level 1 status is associated with the lowest risk source when buying in stock. Health plan required.
Risk Level 2	Herds with level 2 status have had one or two clear consecutive herd tests. Health plan required.
Risk Level 3	Herds with level 3 status have reactors identified at the annual herd test, but these are no more than 3% of animals tested. Health plan required.
Risk Level 4	Herds with level 4 status have reactors identified at the annual herd test, and this amount to more than 3% of the animals tested. Health plan required.
Risk Level 5	Any herd that is not carrying out the required testing or does not have a suitable health plan in place falls into this category. Level 5 status is considered to be the greatest risk source when buying in stock.
